

# Muhammad Kashif

LAB INSTRUCTOR

**Karachi, PK | +92330 834 2284 | [kashif.shafiq@jinnah.edu](mailto:kashif.shafiq@jinnah.edu) | <https://www.linkedin.com/in/mkashif-ansari-842b22159>**

## Objective

---

Passionate and dedicated educator seeking a teaching role to inspire and empower the next generation. Committed to creating a fun, engaging, and supportive learning environment where students feel motivated to explore, grow, and succeed in both academics and life.

## Summary

---

Energetic and student-focused teacher with a strong desire to make learning exciting and meaningful. Skilled in using creative teaching methods, technology, and real-world examples to help students develop critical thinking, confidence, and a love for learning. Believes in building strong relationships with students to support their academic and personal growth, preparing them for a bright future.

## Experience

---

### Mohammad Ali Jinnah University | Lab Instructor

Sept 2025 – Present

- Cisco Packet Tracer
- Ubuntu Operating System
- Bash Scripting
- C Language
- Networking
- FYP Jury Duties
- Teaching Assistant

### Koder Labs | Dot Net Developer

Oct 2024 – August 2025

- SQL database
- ASP.NET Web Development
- C#
- HTML & CSS
- Deployment & Hosting

### Atique Trading Co | IT Administration

Jan 2023 – Dec 2023

- System Administration
- Network Security
- Troubleshooting
- Database management
- IT Procurement

- Logistics Coordination
- Supplier Negotiation
- Customs Compliance
- Import Documentation
- Supply Chain Coordination
- Freight & Shipment Handling

Education

Mohammad Ali Jinnah University, MS Data Science Present

Major: Data Science | Minor: Machine Learning

Karachi institute of economics and Technology, BS Computer science 2024

Major: Data Science | Minor: Machine Learning

Sindh Muslim Science college, Pre-Engineering 2020

Major: Mathematics | Minor: Statistics

Projects

Polyps Detection System | Deep learning Sept 2024 – Dec 2024

Developed a deep learning-based system for detecting polyps in medical images using Convolutional Neural Networks (CNNs). Utilized TensorFlow and OpenCV for image processing and classification to assist in early detection and diagnosis of colorectal cancer. Trained the model on a medical imaging dataset, achieving an accuracy of 76%. By incorporating an extra layer of fuzzy logic the accuracy has increased to 97%.

Stockifistic, distribution management & stock Analysis | Flutter mobile app Sept 2023 – Jun 2024

Designed and developed a data-driven inventory and stock distribution analysis software. Integrated machine learning models to predict stock demand, optimize inventory levels, and improve supply chain efficiency.

Hospital Management System | ASP.NET Sept 2022 – Dec 2022

System using ASP.NET, HTML, and CSS. The system was designed to efficiently manage hospital operations, featuring modules for doctor and patient details, a basic appointment booking system, and finance and accounting management. It also includes functionality for expense tracking and salary processing, aimed at simplifying administrative workflows. The project followed core object-oriented principles, resulting in a clean, modular architecture that is both scalable and easy to maintain, making it suitable for small to medium-sized healthcare facilities.

Multiplayer Soccer Game | Network Programming Jan 2023 – April 2023

Developed a multiplayer Soccer Game using network programming in C# with UDP sockets, enabling real-time gameplay between multiple users over a local or online network. The game utilizes UDP for low-latency communication, ensuring smooth player movements and responsive controls. It features basic match mechanics, player synchronization, and real-time score updates, showcasing my understanding of socket programming, game state management, and network packet handling in C#.

Using Assembly Language, designed to perform basic matrix operations such as addition, subtraction, and multiplication. The calculator takes user input for matrix elements, processes the data using low-level logic, and outputs the result directly to the console. This project enhanced my understanding of memory management, register operations, and control flow in Assembly, while also demonstrating how complex mathematical operations can be handled at the hardware-near level.

## Skills & abilities

---

- Management
- Problem solving
- Communication
- Leadership
- Adaptive
- Supportive
- Creative
- Critical Thinking
- Machine Learning & AI
- SQL & NoSQL
- Git, GitHub, GitLab
- Programming languages: Python, C#, C++, C, Java, Ruby, PHP, Assembly Language
- ASP.NET, Bootstrap, HTML, CSS, JavaScript
- Jira, Trello, Zoho

## Certifications

---

- Python for Data Science by IBM
- Data Analysis with Python by IBM
- Data Visualisation with Python by IBM
- Machine Learning with Python by IBM
- Pytorch: Tensor, Data Set and Augmentation by Cognitive class
- Deep Learning Fundamentals by Cognitive class
- Deep Learning with TensorFlow by IBM
- Statistics 101 by IBM
- Accelerative Deep Learning with GPU's by Cognitive class
